

**Highland Beach, Florida • May 5 - 7, 2006**  
**Business Intelligence ... The World Is Your Market**

With the technology and systems that we are about to implement you will find that all of us have the tools to communicate with doctors anywhere. Here is a brief review of the technology we demonstrated during our meeting:

- Internet video communication systems for dental labs
- Streaming media and conference calling for training and case studies
- Voice over internet (voIP) applications for podcasting and conference calling
- Web applications to use for document and application sharing, annotate and archive
- Web technology and social networking for businesses
- Building a company intranet

In addition to the above, we also were honored to have as a guest speaker Dr. Reda A Abdel-Fattah discussing diagnosis and non-surgical management of facial pain and TMJ disorders and Earl Johnson and Stan Maragos of Zahn Dental discussing a profitable and esthetic system for temporaries.

We reviewed our groups member's strategic marketing plans, forming relationships with our doctors, review of seminar speakers and an update on our beta program.
