Spring 2006

Maximize Esthetics Using the Latest Generation of All Ceramics.

Dr. Edward Lowe

Saturday, October 21, 2006

8:00 AM to 5:00 PM, breakfast and lunch included

Tuition: Doctors, \$295 and Staff, \$175

Carlton Learning Centre, 8 CEUs

We are pleased to bring Edward Lowe, BSc, DMD, a practicing dentist from Vancouver, BC, who focuses on functional aesthetic and reconstructive dentistry, to the Carlton Learning Centre for a seminar

on "Maximizing Aesthetics Using the Latest Generation of All Ceramics." He has dedicated his practice to informing and educating his patients and colleagues about aesthetic and cosmetic dentistry, believing that improving his patient's

smiles through "conservative aesthetic dental techniques" has a positive impact on their overall appearance and self-confidence.

His course will begin with an introduction as to why aesthetic dentistry should be a part of every dentist's practice. He will also discuss current trends in the practice of dentistry. The rest of the course will include a discussion of all ceramic materials, indirect posterior and anterior restorations, advanced treatment planning, a win-win approach to laboratory communication and a check list for an aesthetic enhancement.

An invitation including registration information will be coming under separate cover. You may also pre-register for this course on the enclosed business reply card.

We went digital ... And it was great!

Over the two days, all day Friday, October 21 and Saturday, October 22, we had 40 participants for Rita Bauer's courses, **Let's Go Digital and Capture that Perfect Smile!**

Dr. Garth Bode of Yorkton, was an attendee and had this to say about the course and the facilities:

"Knew nothing about cameras coming in. Feel a lot more comfortable now." "Beautiful surroundings, great food, and a wonderful educational experience."

"There was fantastic interaction between Rita and the course attendees." Jeff Scheirer, RDT

Photo above, shows Rita Bauer demonstrating the art of taking excellent photos.

BASIC Dental Implants ... Beyond Discovery

In-office surgical training

On October 22, 2005, we sponsored the **BASIC Dental Implant Discovery course**, with Phil Freisinger, on implantology for the general dentist. We had excellent participation and the course generated a lot of interest.

Dr. Kell Viczko and patient

As a result, we were pleased to sponsor a continuation of the BASIC course by offering the two-day specialized hands-on training portion on March 17 and 18, 2006. The training was conducted under the guidance of Dr. Americo Fernandes and held in the operatory of the Main Street Dental Clinic in Moose Jaw. Three doctors, Dr. Mike Barker, Dr. Kell Viczko and Dr. Tony Romaniuk selected suitable patients using the pre-set criteria from the training and each patient had a BASIC Dental Implant placed.

Dr. Mike Barker and patient

Dr. Tony Romaniuk with Dr. Americo Fernandes and patient

"After the BASIC Discovery course, I was excited about the prospect of placing a single-tooth implant in one of my patients. The hands-on training was very well presented and using the pre-set protocol for patient selection, I felt confident that not only would the training be a success for me, but for my patient as well."

-- Dr. Mike Barker,
Moose Jaw.

We are able to do this in other dental offices as well, with just three doctors needed to participate.

If you would be interested in learning more about BASIC Dental Implants, or would like to participate in the two-day hands-on training session, please call Jeff Scheirer, RDT, at the laboratory, or see the enclosed business reply card.

The Revolutionary Prep-Marking System ... PrepCheck™

PrepCheck promotes adequate reduction allowing ideal thickness of the final restoration and ensures superior strength and aesthetics. PrepCheck's special coating marks the tooth in areas that need to be reduced. It comes in three sizes. For samples of the product, see the enclosed business reply card.
